

Colored Contact Lens and Method of Making Same

Abstract of Disclosure

A method for coloring a contact lens. The method comprises providing a contact lens having a pupil region and a generally annular-shaped iris region surrounding the pupil region. The iris region is adapted to at least partially cover a wearer's iris when the wearer is wearing the contact lens. The method further comprises providing a printer assembly having an inkjet print head, and using the printer assembly to deposit at least one colorant on the iris region of the contact lens in a manner to alter the appearance of the iris of the wearer when the wearer is wearing the contact lens.
